

**NAME**

`gtty` – get typewriter status

**SYNOPSIS**

(`gtty = 32.`)

(file descriptor in `r0`)

**sys `gtty`; `arg`**

...

**`arg`: `.=.+6`**

**`gtty`(`fildes`, `arg`)**

**int `arg`[3];**

**DESCRIPTION**

*Gtty* stores in the three words addressed by *arg* the status of the typewriter whose file descriptor is given in `r0` (resp. given as the first argument). The format is the same as that passed by *stty*.

**SEE ALSO**

`stty` (II)

**DIAGNOSTICS**

Error bit (c-bit) is set if the file descriptor does not refer to a typewriter. From C, a `-1` value is returned for an error, `0`, for a successful call.
